

FocusView™ Secure Inquiry

*Convenient Viewing of Pending Orders
and Results at Focus Diagnostics*

FocusView™ is a simple, practical way to look up the status of patient orders and results of tests sent to Focus Diagnostics. Secure inquiry using FocusView™ is available through the Internet or a dial-up connection. This password-protected software connects directly to Focus Diagnostics' laboratory information system so you can easily find your laboratory's requested test results in our system. Interfaced laboratories often find this quick inquiry method to be a valuable tool to complement their FocusDirect™ interface; smaller labs with manual processes may rely on FocusView™ as their primary connection to Focus for viewing information. FocusView™ software runs on a standard computer workstation with modem.

- Quickly verify receipt of orders and pending results at Focus
- View released patient results quickly at your convenience
- Queue results for reprint (with autodial printer)
- Look up specimen requirements and other test information in your own laboratory
- Compatible with Focus autodial printer

Autodial and Autofax

Your laboratory can receive test reports automatically at pre-determined intervals or on demand via remote printer or fax. Autofax allows your laboratory to manage test reports conveniently without added computer equipment. An autodial printer provides you the convenience of having your Focus reports printed directly in your laboratory. You also have the option of sharing the dedicated phone line for access to printed results via FocusView™ through the autodial printer.

All Focus connectivity solutions are designed to comply with HIPAA regulations.

Please contact your Focus Account Manager to learn more about FocusLink® or other connectivity options from Focus Diagnostics.
